

CNC Machining

Plan the complete part, from stock to final inspection.

Manufacturing reference. Material records and the order specification establish the actual grade and supplied scope.

01 / Choose the route

Identify turned, milled and mixed features. Review five-axis access or turn-mill when several faces and relationships must be controlled.

02 / Control the interfaces

Identify datums, fits, threads, mounting faces and functional tolerances. Distinguish general dimensions from acceptance-critical features.

03 / Quote the final condition

Include secondary operations, finish, masking, inspection, packing and quantities. Compare complete delivered scope rather than an unfinished machining price.

Use with the released drawing. The quotation confirms capability, responsibilities, price and timing for your project.

Your quotation checklist.

Share what you have. Identify the open decisions before the part is released.

- ☐ Controlled STEP/STP model and dimensioned PDF
- ☐ Exact material grade, temper and stock requirements
- ☐ Datums, fits, threads and critical dimensions
- ☐ Finish, masking and cosmetic acceptance
- ☐ First quantity, repeat demand and delivery country
- ☐ Material records and dimensional report scope

Agree the acceptance package.

1. Approve the drawing revision before release.
2. Agree final measurement condition and sampling.
3. Identify any outsourced operations in the quotation.
4. Confirm packing and identification for critical surfaces.

Confidential drawing? Arrange an NDA before sharing sensitive files. Begin with a general component description if needed.
