

Die Casting + Machining

Define the casting and the machined interfaces separately.

Manufacturing reference. Material records and the order specification establish the actual grade and supplied scope.

01 / Separate cast and machined features

Mark machining faces, bores, threads, datums and stock allowances. State which surfaces may remain in the cast condition.

02 / Review tooling and demand

Identify whether a casting or existing tool is supplied. New tooling, casting supply and machining responsibilities must be explicit in the quotation.

03 / Set final acceptance

Define visible-surface expectations, casting-defect acceptance, finish and final dimensional checks. Specify pressure or leak testing only where required and agreed.

Use with the released drawing. The quotation confirms capability, responsibilities, price and timing for your project.

Your quotation checklist.

Share what you have. Identify the open decisions before the part is released.

- ☐ Casting and final-part drawings with revisions
- ☐ Alloy, casting route and supplied-blank condition
- ☐ Machining datums, stock and critical interfaces
- ☐ Existing tooling ownership or new-tool requirements
- ☐ Annual demand, batch size and sample approval
- ☐ Finish, defect acceptance and required test records

Agree the acceptance package.

1. Approve the blank and finished-part revisions.
2. Agree tooling and supplier responsibility.
3. Define defect and cosmetic acceptance criteria.
4. Confirm any leak or pressure-test specification.

Confidential drawing? Arrange an NDA before sharing sensitive files. Begin with a general component description if needed.
